

Census 2001

Key Statistics for urban areas in England and Wales

Since the release of this publication in June 2004 corrections have been made to figures in table KS24 for 'All people: who moved out of the area' for 103 areas, and 'All people in ethnic group other than white: who moved out of the area', for 84 of these 103 areas.

Corrected counts and details of the areas affected are contained in the downloadable Excel file associated with this publication, or from Census Customer Services.

About the Office for National Statistics

The Office for National Statistics (ONS) is the government agency responsible for compiling, analysing and disseminating many of the United Kingdom's economic, social and demographic statistics, including the retail prices index, trade figures and labour market data, as well as the periodic census of the population and health statistics. It is also the agency that administers the statutory registration of births, marriages and deaths. The Director of ONS is the National Statistician and the Registrar General for England and Wales.

A National Statistics publication

National Statistics are produced to high professional standards set out in the National Statistics Code of Practice. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference.

Foreword

Results from the Census are made possible by the co-operation of the public in responding to the Census; by the hard work of the Census field-staff; and by the assistance of many other people and organisations that have supported all aspects of the Census. The Registrar General would like to thank all those who have contributed to the Census.

A handwritten signature in black ink that reads "Len Cook". The signature is written in a cursive style with a large initial 'L' and a stylized 'C'.

Len Cook

Registrar General for England and Wales

Introduction

This Report has results for urban areas - towns, cities, and major agglomerations - on all topics covered by the 2001 Census in England and in Wales. The Report is published under the authority of the Census Act 1920.

Urban areas range in size from 1,500 people to the largest agglomerations. Results for those with 20,000 or more people are in this printed report. The results for all urban areas are in a further four printed reports - the North, the Midlands, the South East, and the South West and Wales - but the CD accompanying this Report contains corresponding results for all urban areas with at least 1,500 people. Summary results for the urban parts and remaining parts of each local authority in England and Wales are available separately from the National Statistics Website at www.statistics.gov.uk/census2001/ks_ub_ad.asp.

Instructions on using the CD are in *Appendix B: Using the CD*. The printed reports are available as pdfs from the National Statistics website at www.statistics.gov.uk.

The definition of urban areas

Census results are produced for urban areas to meet the widespread interest in information about towns and cities as such, and for comparisons between urban populations and with those living elsewhere. Similar information was published in reports from the 1981 and 1991 Censuses¹, and it is possible to see the dynamics of towns, cities and large urban agglomerations by comparing results from the three censuses.

The traditional concept of a town or city would be a free-standing built-up area with a sufficient number and variety of shops and services, including perhaps a market, to make it recognisably urban in character. It might have administrative, commercial, educational, entertainment and other social and civic functions, and, in many cases, have evidence of being historically well established. It would be a focus of a local network of transport, often a location for industries, and a place of employment for people from surrounding areas. It would be a place known beyond its immediate vicinity.

The current position in Britain is more complex. Free-standing towns have grown and coalesced into continuously built-up areas, and subsidiary centres have developed as suburbs and satellite towns. The process continues with the expansion of business and retail parks. Whilst some historic towns have stagnated and lost urban functions, many more settlements have expanded rapidly to the size of small towns, but without the range of traditional urban functions. In these circumstances no attempt has been made to define an urban area by the presence or absence of 'urban' functions.

Approaches to definition

An obvious way to define a town or city is in terms of an administrative boundary. This was possible in censuses in Britain up to and including 1971. In England and Wales, until reorganisation of local government in 1974, the division between boroughs, urban districts and rural districts provided an approximate urban/rural split. But there were serious disadvantages. The boundaries changed infrequently, and often did not reflect the expansion of urban areas.

The local government boundaries established after reorganisation in the mid 1970s, and generally remaining in England, are unsuited for the definition of urban areas because many districts were deliberately drawn up to bring together towns and the surrounding countryside into single administrative units. Although local government areas were reorganised again in Wales in the mid 1990s, the new Unitary Authorities continued the mix of town and countryside.

There are, however, other approaches to defining an urban area. It may be defined either in terms of the *built-up area* ('bricks and mortar') or by *density* as an indicator of urbanisation. Alternatively it may be defined in terms of the area for which services and facilities are provided - the *functional area* - including not only the *built-up area* but also surrounding countryside and settlements, although this approach is not straightforward in many parts of Britain where catchments merge and overlap.

¹ OPCS/GRO(S). 1981 *Census Key Statistics for Urban Areas, Great Britain*. HMSO, 1984. ISBN 0 11 691064 X. ONS/GRO(S). 1991 *Census Key Statistics for Urban and Rural Areas, 1997*. ISBN 0 11 691679 6

The first attempt to define urban areas in a Census was made after 1951, when a limited range of statistics was published in the General Report² and conurbations were also defined³. After the 1966 sample Census, the Ministry of Housing and Local Government produced an analysis of *de facto* urban areas⁴. But neither of these approaches provided a suitable base for later censuses, and a new approach was introduced in the 1981 Census, following local government reorganisation, which has been carried forward to the current report.

Bricks and mortar

The new approach was based on the extent of urban development indicated on Ordnance Survey (OS) maps. This met the needs at the time of the Office for Population Censuses and Surveys (OPCS) and the Department of the Environment, and also enabled internationally comparable statistics to be produced. In Scotland the method adopted was a mix of the density and the bricks and mortar approaches.

For this report the definition of an urban area is an extent of at least 20 hectares and at least 1,500 residents at the time of the 2001 Census.

The starting point is the identification by OS of areas with land use which is irreversibly urban in character. This comprises

- permanent structures and the land on which they are situated, including land enclosed by or closely associated with such structures;
- transportation corridors such as roads, railways and canals which have built up land on one or both sides, or which link built-up sites which are less than 200 metres apart;
- transportation features such as airports and operational airfields, railway yards, motorway service areas and car parks;
- mine buildings, excluding mineral workings and quarries; and
- any area completely surrounded by built-up sites.

Areas such as playing fields and golf courses are excluded unless completely surrounded by built-up sites.

The prerequisite for the recognition of an urban area is that the area of urban land should extend for 20 hectares or more. Separate areas of urban land are linked if less than 200 metres apart. Land between built-up areas is not regarded as urban unless it satisfies one of the conditions listed above.

The critical factor for the inclusion of an urban area in this report is a minimum population of 1,500 residents at Census day in the Output Areas - the smallest building bricks for which detailed Census statistics are released - which best fit to the boundary of the urban land.

The second stage was therefore to fit Output Areas to each area of urban land, and to calculate the combined population of the Output Areas falling within each urban area. The automated procedure allocated an Output Area to an area of urban land where it fell entirely within the land or when the majority or largest proportion of the population located by the one metre coordinate references of addresses fell within the land. This produced a good fit of population to the urban land, but separated the extent of urban areas.

Key Statistics for settlements recognised as having at least 20 hectares of urban land but fewer than 1,500 residents - some 2,063 settlements in total - are available as a separate product on CD from Census Customer Services (contact details shown under *Further information* below).

The use of a 'best fit' definition follows the practice used to define urban areas for the 1981 and 1991 reports, but also complies with National Statistics policy on the general use of stable small area building bricks and meets confidentiality, or disclosure protection, requirements. The release of statistics for the *exact* boundaries of urban land could pose the risk that information about small numbers of people could be deduced by the comparison of standard sets of statistics for overlapping areas, but the risk is avoided by the use of standard building bricks.

Urban sub-divisions

Major urban agglomerations are sub-divided to provide results about localities within them, and to enable broad comparisons to be made with previously published census results. Some smaller agglomerations are also sub-divided where there are well defined localities. Previously separate urban areas, where urban land has since merged, are also recognised by sub-divisions

² General Register Office. *Census 1951, England and Wales: General Report*. HMSO, 1958

³ General Register Office. *Census 1951, England and Wales: Report on Greater London and five other conurbations*. HMSO 1954

⁴ Department of the Environment, *Regional Plans Directorate. De facto urban areas in England and Wales, 1966*. DoE, 1966

where possible. Sub-divisions often follow the boundaries of local authorities existing before re-organisation in 1974, or the boundaries of current authorities within agglomerations.

Correction

The small town of Helsby, which lies between Chester and Runcorn and is a free standing urban area, has been inadvertently included as a sub-division of the Greater Manchester urban area. This was the result of a coding error made at a late stage in the preparation of the Report, detected only as the Report went to press and the supplementary CD was in production. The Key Statistics for Helsby, which had 4,701 residents and 1,990 households in 2001, remain in the tables with those of other sub-divisions of the Greater Manchester urban area on the CD and in the printed report for 'the North'. They are not shown separately in the tables in this printed report as Helsby falls below the threshold for inclusion. The counts for Helsby are included in the figures for the Greater Manchester urban area as a whole which has a population of some 2.24 million. This has only a slight effect on the figures for Greater Manchester, but the counts for Helsby may be subtracted from those for Greater Manchester if required. The figures for Helsby are included correctly in the summary tables for the urban part of the Vale Royal local authority.

Rural areas

The results for populations outside urban areas which are available separately are for completeness of comparison with other Census results and also for general comparison with the 1981 and 1991 reports, and 'rural' areas as such are not defined.

A government working party is preparing a definition and classification of rural areas in England and Wales which will use Output Areas as building bricks, but a final version was not available at the time of going to press.

Some of the smaller settlements defined as urban areas for this report may be included in the new definition of rural areas, and the populations of the latter may differ from the populations outside urban areas, but the two definitions will be compatible through the common base of Output Area building bricks.

Urban areas in Great Britain

This report, unlike those from the 1981 and 1991 Censuses, does not contain figures for equivalent urban areas in Scotland. These have been published in a separate report by the General Register Office Scotland⁵.

The definition of urban areas in Scotland is similar to the approach in England and Wales, and urban areas in Scotland are no longer constrained within local authority boundaries as they were in 1981 and 1991, but the minimum threshold for the inclusion of an urban area in the report for Scotland is 500 to reflect the sparsity of population and the relative importance of smaller settlements in some parts of Scotland.

Comparisons with urban areas in 1981 and 1991

Broadly, the dynamics of particular towns, cities and larger agglomerations can be followed through the three sets of reports on urban areas particularly when change is marked, including the occasional loss of an area, some mergers, and many more new areas. But this is subject to allowance for the effects of changes in the topics, definitions and classifications in the successive Censuses, and particularly to the introduction of the One Number method in the 2001 Census to add estimates for undercoverage to the final counts.

Comparisons are also subject to more detailed changes in the methods of identifying urban areas, particularly those with populations below 2,000. The building brick approach was used to identify urban areas for the 1981 and 1991 reports, but the fit to the boundaries of urban land was through typically larger Enumeration Districts. The cut off point for inclusion was all or part of four or more Enumeration Districts, so the identification of small urban areas was less precise. The methods used by Ordnance Survey to recognise urban land have also varied somewhat, and the distance for merger of areas of urban land increased from 50 metres for 1991 to 200 metres in 2001. It is therefore not advisable to make comparisons between 1981 – 2001 figures for any urban area with a population of under 2,000 at any of the Censuses, and comparisons for areas with populations of under 5,000 should be made with caution.

⁵ GROS, *Key Statistics for Settlements and Localities Scotland, 2003*, ISBN 1 874451 68 0, also available as a pdf at www.gro-scotland.gov.uk/grosweb/grosweb.nsf/pages/scotcen8

Digital boundaries and codes for urban areas

The boundaries surrounding the Output Areas which make up each urban area, or settlement with less than 1,500 residents, may be derived by using the digital Output Area boundaries and the Output Area by higher area look-up table which are both available without charge from Census Customer Services.

Such boundaries will, however, often surround substantially larger areas than the boundaries around urban land

The manipulable files included on the CD include reference codes for each area. These codes are based on the urban area codes used in 1991, and are derived partly from the National Grid. They are not related to the standard codes used for administrative geographies.

The statistical results

Key Statistics

The Key Statistics tables, which are included in this Report for all urban areas and sub-divisions with at least 1,500 residents, provide information for all topics covered by the Census. There are approximately thirty Key Statistics tables and each table is designed to summarise detailed information relating to a single topic.

Census Area Statistics

These tables, which are not included in this Report, provide detailed results, with cross-tabulation of two or more topics. They include Theme Tables which provide information on particular populations such as dependent children or pensioner households. There are also some Univariate Tables, each providing a more detailed breakdown for a single topic. More information about Census Area Statistics for urban areas is available from Census Customer Services.

Users can also produce detailed results for urban areas by using the Census Area Statistics for Output Areas, together with the Output Area to higher areas look-up table, which indicates which Output Areas should be grouped to form an urban area. Results produced by adding up Output Areas in this way may differ slightly from the results included in Census Area Statistics for urban areas in England and Wales.

Finding information in this Report

This section describes the arrangement of information in the printed report. Separate instructions are provided within the information on the CD.

A list of tables is provided on page 9. Within each table, urban areas are arranged alphabetically within broad regions - the North, the Midlands, and the South East - defined largely as aggregations of Government Office Regions, and for the South West and separately for Wales. The few urban areas which straddle the boundaries of these regions are shown under only one of the regional headings. Sub-divisions with at least 20,000 residents are shown in alphabetic order under the urban area.

There is an index of all urban areas with populations of at least 1,500 on page 425, which can be used to check whether a place has been defined as an urban area. It has a map reference for areas which appear in this volume as well as on the CD. The index identifies the region in which areas with less than 20,000 residents appear. Results for these areas are provided on the CD and in the appropriate printed regional volume. Further information about using the index and maps to find places defined as urban areas is on page 411.

Explanations of terms used in tables are provided in the *Glossary*. Where a particular explanation is required within a table, this is indicated by a numbered footnote marker and the information provided in a footnote to the table.

Further information

More detailed information on the terms used in tables; comparability with the 1991 Census; the Census questions; and response and imputation rates will be made available on the National Statistics website and published in other reports, as described in *Further results from the 2001 Census* below.

Results for urban and remaining parts of local authorities

Additional results for the urban and remaining parts of each local authority in England and Wales, for urban areas by size, and on the hectares and population density of urban areas are available separately at www.statistics.gov.uk/census2001/ks_ub_ad.asp

Information on the CD

The CD accompanying this Report contains results for all urban areas with at least 1,500 residents in a broadly similar form to these in the printed report. The CD provides an interface to enable the selection of statistics on a particular topic, or for a particular area, and a searchable list of tables and topics is also provided. Free software supplied on the CD also enables data to be manipulated, or exported into a range of standard formats. The CD also contains electronic versions of the maps appearing in this volume and links are provided to enable you to access the National Statistics website and view a range of other maps and statistics interactively on the web. More detailed information on using the CD is provided on the CD itself.

Correction

A small number of urban areas have been transposed from the South West to Wales, and *vice versa*, in the tables included on the CD.

The urban areas Camelford, Crossways, Feniton, Marldon, Newton Poppleford, Ramsbury, Roche, Starcross, Tatworth, The Common, Uffculme, and Wickwar, which are listed under Wales, fall entirely within England and should have been listed under South West. In addition, Hay on Wye and Chepstow Urban Area fall partly in England, and, as there is no information on Welsh language skills for these parts, each of the two areas as a whole should have been listed under South West. Marshfield is listed under South West but should appear under Wales. Results for these areas can be found on the CD by using the Search facility.

Results on Welsh language skills, and identification as Welsh, for areas incorrectly listed on the CD under Wales should be disregarded. Results for these topics for Marshfield are provided on the National Statistics website at www.statistics.gov.uk/census2001/ks_ub_ad.asp.

This error was detected after the production of the CDs, but in time for the correct information to appear in the printed volume for the South West and Wales, and in the tables on urban areas by size and on hectares and density available separately on the National Statistics website (see page 4). This report is not affected.

Populations covered in this Report

Each table relates to a group of people or households, referred to as the 'table population'. Many tables relate to the population 'All people',

but other tables relate to subsets of 'All people', such as 'People in employment aged 16 – 74', or to distinct populations such as 'All households'

People

In the 2001 Census information was collected only on usual residents. This contrasts to the 1991 Census which collected information on both usual residents and visitors on Census night. A usual resident is generally defined as someone who spends most of their time residing at that address. It includes:

- People who usually live at that address but are temporarily away from home (on holiday, visiting friends or relatives, or temporarily in a hospital or similar establishment) on Census Day.
- People who work away from home for part of the time, or are members of the Armed Forces.
- Students if it is their term-time address
- A baby born before 30th April even if it is still in hospital.
- People present on Census Day, even if temporarily, who have no other usual address.

However, it does not include:

- Anyone present on Census Day who has another usual address.
- Anyone who has been living or intends to live in a special establishment such as a residential home, nursing home or hospital for six months or more.

Households

A household is defined as one person living alone, or a group of people (not necessarily related) living at the same address with common housekeeping - that is, sharing either a living room or sitting room or at least one meal a day.

Communal establishments

A communal establishment is defined as an establishment providing managed residential accommodation. 'Managed' means full-time or part-time supervision of the accommodation.

In most cases (for example, prisons, large hospitals, hotels) communal establishments can be easily identified. Identifications is less easy with small hotels, guest houses and sheltered accommodation. Special rules apply in these cases:

Small hotels and guest houses are treated as communal establishments if they have the capacity to have 10 or more guests, excluding the owner/manager and his/her family.

Sheltered housing is treated as a communal establishment if less than half the residents possess their own facilities for cooking. If half or more possess their own facilities for cooking (regardless of use) the whole establishment is treated as separate households.

More information on the definition of table populations can be found in the *Glossary*.

Quality of the results

The use of the One Number Census methodology (see *Appendix A: Background information on the 2001 Census*) means that the results of the 2001 Census cover the entire population of England and Wales, and are the most reliable achievable. However, there are a number of sources of potential error in the results. These include

- 'Incorrect' information provided on the forms.
- Sampling error related to estimates derived through the One Number Census process.
- Errors introduced during processing (such as coding errors).

Some elements of 'incorrect' information will have been corrected during the edit process (see *Appendix A: Background information on the 2001 Census*). Following this, the results have undergone an extensive quality assurance process, including checks against administrative records and sources of information on particular groups such as students and the armed forces.

As the Census results, which incorporate an adjustment for under-enumeration through the One Number Census methodology, are estimates based partly on a sample survey, sampling errors can be used as a guide in assessing the accuracy of the results. The sampling error can be used to construct a 95 per cent confidence interval - that is a range in which we can be 95 per cent confident that the true value lies. For the population of England and Wales, this confidence interval is 52,041,916 +/-104,000 (0.2 per cent of the estimated population). An important aspect of the One Number Census methodology is that the estimates are unbiased - that is, that they are not systematically above or below the true value.

Further information on coverage and imputation rates to individual questions is available at www.statistics.gov.uk/census2001/methodology.asp. This material now includes quality indicators for small areas in the form of a rating scale based on the One Number Census imputation rates, as well as overall response rates and estimates of sampling errors for Local Authority Districts. A detailed report covering a range of aspects of quality of the Census results will be published in 2004.

Comparison of the results with those from the 1991 Census

Comparison of the results in this Report with those of the 1991 Census must be treated with caution as the comparison of results from the 1991 and 2001 Censuses is affected by three factors.

Changes in definition

There are a number of differences in definitions and information collected between the 1991 and 2001 Census. More information on this will be made available in the 2001 Census *Definitions* volume and on the National Statistics website.

Changes in the geographic base

As previously mentioned, changes in geographic boundaries between 1991 and 2001 may mean that results which overtly relate to the same named area actually relate to different boundaries.

Adjustment for under-enumeration

Results of the 2001 Census have been adjusted, via the One Number Census process, to account for under-enumeration. As results of the 1991 Census were not subject to the same methodology, direct comparisons with the 1991 results must be undertaken with caution.

Where comparisons between the 1991 and 2001 Census results are required, the effects of the above changes are in most cases minimal but can be further mitigated by comparing differences between percentages calculated from the respective bases in each census rather than measuring the percentage difference between the actual counts at each Census.

Other Censuses in the UK

Separate Censuses were carried out, on the same day and using similar methodologies, in Scotland and Northern Ireland, under the authority of the respective devolved administration and Registrars General. Information on these Censuses is available from:

Further results from the 2001 Census

Further results from the 2001 Census provide information for a range of administrative areas and other geographies in common use. In addition to the statistical reports, supporting information on the Census, including definitions of Census terms; an evaluation of the quality of the Census results; and information on geographies used in the Census results will also be published. Further information on results from the 2001 Census, including information on commissioning output, is available on the National Statistics website www.statistics.gov.uk/census2001/op.asp or from Census Customer Services.

Chester	80,121	38,241	41,880	..	98.30	1.70	919		

Notes: 1. 1991 population figures are not available for urban areas. For further information see Notes to Tables.
 2. Care must be taken when interpreting intercensal population change, as there have been changes in definition between 1991 and 2001, and the 2001 counts have been adjusted to account for under-enumeration.
 3. Area measurements for urban areas are not provided in this report. See Notes to tables.
 4. 'Number of students away from home' is the number of students and schoolchildren in full-time education who would reside in the area were they not living away from home in term-time. Data for the number of students away from home was not available from the 1991 Census.

Notes: 1. 1991 population figures are not available for urban areas. For further information see Notes to Tables.
 2. Care must be taken when interpreting intercensal population change, as there have been changes in definition between 1991 and 2001, and the 2001 counts have been adjusted to account for under-enumeration.
 3. Area measurements for urban areas are not provided in this report. See Notes to tables.
 4. 'Number of students away from home' is the number of students and schoolchildren in full-time education who would reside in the area were they not living away from home in term-time. Data for the number of students away from home was not available from the 1991 Census.

Notes: 1. 1991 population figures are not available for urban areas. For further information see Notes to Tables.
 2. Care must be taken when interpreting intercensal population change, as there have been changes in definition between 1991 and 2001, and the 2001 counts have been adjusted to account for under-enumeration.
 3. Area measurements for urban areas are not provided in this report. See Notes to tables.
 4. 'Number of students away from home' is the number of students and schoolchildren in full-time education who would reside in the area were they not living away from home in term-time. Data for the number of students away from home was not available from the 1991 Census.

Notes: 1. 1991 population figures are not available for urban areas. For further information see Notes to Tables.

2. Care must be taken when interpreting intercensal population change, as there have been changes in definition between 1991 and 2001, and the 2001 counts have been adjusted to account for under-enumeration.

3. Area measurements for urban areas are not provided in this report. See Notes to tables.

4. 'Number of students away from home' is the number of students and schoolchildren in full-time education who would reside in the area were they not living away from home in term-time. Data for the number of students away from home was not available from the 1991 Census.

Notes: 1. 1991 population figures are not available for urban areas. For further information see Notes to Tables.

2. Care must be taken when interpreting intercensal population change, as there have been changes in definition between 1991 and 2001, and the 2001 counts have been adjusted to account for under-enumeration.

3. Area measurements for urban areas are not provided in this report. See Notes to tables.

4. 'Number of students away from home' is the number of students and schoolchildren in full-time education who would reside in the area were they not living away from home in term-time. Data for the number of students away from home was not available from the 1991 Census.

Notes: 1. The living arrangements variable is different to marital status. It combines information from both marital status and the relationship matrix. Therefore a person living as part of a 'cohabiting couple' could in fact be married (to someone else) but will not appear as married or separated in this classification.

2. A person not living in a couple can be classified married (or re-married) if they denote their marital status as married (or re-married) but have no spouse or partner resident in the household.

Notes: 1. The living arrangements variable is different to marital status. It combines information from both marital status and the relationship matrix. Therefore a person living as part of a 'cohabiting couple' could in fact be married (to someone else) but will not appear as married or separated in this classification.

2. A person not living in a couple can be classified married (or re-married) if they denote their marital status as married (or re-married) but have no spouse or partner resident in the household.

Table **KS03****Living arrangements¹ - continued****All people aged 16 and over in households**

Area	All people aged 16 and over in households	Percentage of people aged 16 and over in households

Notes: 1. The living arrangements variable is different to marital status. It combines information from both marital status and the relationship matrix. Therefore a person living as part of a 'cohabiting couple' could in fact be married (to someone else) but will not appear as married or separated in this classification.

2. A person not living in a couple can be classified married (or re-married) if they denote their marital status as married (or re-married) but have no spouse or partner resident in the household.

Table **KS03****Living arrangements¹ - continued****All people aged 16 and over in households**

Notes: 1. The living arrangements variable is different to marital status. It combines information from both marital status and the relationship matrix. Therefore a person living in part of a 'cohabiting couple' could in fact be married (to someone else) but will not appear as married or separated in this classification.

2. A person not living in a couple can be classified married (or re-married) if they denote their marital status as married (or re-married) but have no spouse or partner resident in the household.

Notes: 1. The living arrangements variable is different to marital status. It combines information from both marital status and the relationship matrix. Therefore a person living as part of a 'cohabiting couple' could in fact be married (to someone else) but will not appear as married or separated in this classification.

2. A person not living in a couple can be classified married (or re-married) if they denote their marital status as married (or re-married) but have no spouse or partner resident in the household.

Table **KS03****Living arrangements¹ - continued****All people aged 16 and over in households**

Area	All people aged 16 and over in households	Percentage of people aged 16 and over in households						
		Living in a couple		Not living in a couple				
		Married or re-married	Cohabiting	Single (never married)	Married or re-married ²	Separated (but still legally married)	Divorced	Widowed

Notes: 1. Limiting long-term illness covers any long-term illness, health problem or disability which limits daily activities or work.

2. Working age population is 16 – 64 years inclusive for men and 16 – 59 years inclusive for women.

3. General health refers to health over the 12 months prior to Census day (29 April 2001).

4. Provision of unpaid care: looking after, giving help or support to family members, friends, neighbours or others because of long-term physical or mental ill-health or disability or problems relating to old age.

Notes: 1. Limiting long-term illness covers any long-term illness, health problem or disability which limits daily activities or work.

2. Working age population is 16 – 64 years inclusive for men and 16 – 59 years inclusive for women.

3. General health refers to health over the 12 months prior to Census day (29 April 2001).

4. Provision of unpaid care: looking after, giving help or support to family members, friends, neighbours or others because of long-term physical or mental ill-health or disability or problems relating to old age.

Table **KS08****Health and provision of unpaid care - continued****All people**

Area	All people	Limiting long-term illness ¹		General health ³			Provision of unpaid care ⁴			
		Percentage of people with limiting long-term illness ¹	Percentage of working age population with limiting long-term illness ²	Percentage of people whose health was:			All people who provide unpaid care	Percentage of people who provide unpaid care ⁴

Notes: 1. Limiting long-term illness covers any long-term illness, health problem or disability which limits daily activities or work.

2. Working age population is 16 – 64 years inclusive for men and 16 – 59 years inclusive for women.

3. General health refers to health over the 12 months prior to Census day (29 April 2001).

4. Provision of unpaid care: looking after, giving help or support to family members, friends, neighbours or others because of long-term physical or mental ill-health or disability or problems relating to old age.

Table **KS08****Health and provision of unpaid care - continued****All people**

Area	Limiting long-term illness ¹			General health ³			Provision of unpaid care ⁴			
	All people	Percentage of people with limiting long-term illness ¹	Percentage of working age population with limiting long-term illness ²	Percentage of people whose health was:			All people who provide unpaid care	Percentage of people who provide unpaid care ⁴

Notes: 1. Limiting long-term illness covers any long-term illness, health problem or disability which limits daily activities or work.

2. Working age population is 16 – 64 years inclusive for men and 16 – 59 years inclusive for women.

3. General health refers to health over the 12 months prior to Census day (29 April 2001).

4. Provision of unpaid care: looking after, giving help or support to family members, friends, neighbours or others because of long-term physical or mental ill-health or disability or problems relating to old age.

Table **KS08****Health and provision of unpaid care - continued****All people**

Area	Limiting long-term illness ¹			General health ³			Provision of unpaid care ⁴			
	All people	Percentage of people with limiting long-term illness ¹	Percentage of working age population with limiting long-term illness ²	Percentage of people whose health was:			All people who provide unpaid care	Percentage of people who provide unpaid care ⁴

Notes: 1. Limiting long-term illness covers any long-term illness, health problem or disability which limits daily activities or work.

2. Working age population is 16 – 64 years inclusive for men and 16 – 59 years inclusive for women.

3. General health refers to health over the 12 months prior to Census day (29 April 2001).

4. Provision of unpaid care: looking after, giving help or support to family members, friends, neighbours or others because of long-term physical or mental ill-health or disability or problems relating to old age.

Table **KS08****Health and provision of unpaid care - continued****All people**

Area	Limiting long-term illness ¹			General health ³			Provision of unpaid care ⁴			
	All people	Percentage of people with limiting long-term illness ¹	Percentage of working age population with limiting long-term illness ²	Percentage of people whose health was:			All people who provide unpaid care	Percentage of people who provide unpaid care ⁴

Notes: 1. Limiting long-term illness covers any long-term illness, health problem or disability which limits daily activities or work.

2. Working age population is 16 – 64 years inclusive for men and 16 – 59 years inclusive for women.

3. General health refers to health over the 12 months prior to Census day (29 April 2001).

4. Provision of unpaid care: looking after, giving help or support to family members, friends, neighbours or others because of long-term physical or mental ill-health or disability or problems relating to old age.

Table **KS08****Health and provision of unpaid care - continued****All people**

Area	All people	Limiting long-term illness ¹		General health ³			Provision of unpaid care ⁴			
		Percentage of people with limiting long-term illness ¹	Percentage of working age population with limiting long-term illness ²	Percentage of people whose health was:			All people who provide unpaid care	Percentage of people who provide unpaid care ⁴
